Exam Code:CTFL-FOUNDATION

Exam Name:ISTQB Certified Tester Foundation Level

Version: Demo

QUESTION 1

Which of the following statements are correct for walkthroughs?

(i)

Often led by the author.

(ii)

Documented and defined results.

(iii) All participants have defined roles.

(iv)

Used to aid learning.

(v)

Main purpose is to find defects.

A.

(i) and (v) are correct.

B.

(ii) and (iii) are correct.

C.

(i) and (iv) are correct.

D.

(iii) and (iv) are correct.

Correct Answer: C

QUESTION 2

Which of the following would be a good test technique to use when under severe time pressure?

A. Exploratory testing

B. Structure based testing

C. Specification based testing

D. Use Case testing

Correct Answer: B

QUESTION 3

For a given set of test-cases, which of the following is a benefit of running these tests with a test

automation tool?

A. Test coverage is increased.

B. The number of found bugs is reduced.

C. The total cost of the test project always decreases

D. The time spent on repetitive tasks is reduced.

Correct Answer: D

QUESTION 4

Why is independent testing important? [K1]

A. Because independent testers make fewer assumptions than developers

B. Because independent testers are isolated from the development team

C. Because independent testers can verify assumptions made during specification and implementation of the system

D. Because independent testers have a greater sense of responsibility for quality than developers

Correct Answer: C

QUESTION 5

Which of the following is NOT a major responsibility of a tester?

A. Producing interim test reports.

B. Finding the root cause of a defect.

C. Writing the test specification.

D. Report and tracking bugs.

Correct Answer: A

QUESTION 6

What can testing demonstrate?

A. Testing can demonstrate that there are no defects

B. Testing can demonstrate that there are defects

C. Testing can demonstrate that the software is correct

D. Testing can demonstrate that there are no hidden defects in the software

Correct Answer: B

QUESTION 7

Regarding the process described above, what is the most important recommendation you would make using IEEE 1044 as a guide?

A. No priority or severity assigned

B. Incident numbering is manual rather than automated

C. No mentioning of reproduceability

D. No classification on type of incident

Correct Answer: A

Testlet 1

Topic 12, Scenario 12 "Automatic Teller Machine (ATM)"

You are a test manager in charge of integration, system and acceptance testing for a bank. You are working on a project to upgrade an existing ATM to allow customers to obtain cash advances from supported credit cards. The system should allow cash advances from 20 to 500, inclusively, for all supported credit cards. The supported credit cards are American Express, VISA, Eurocard and Mastercard. In the master test plan the following items are listed in the section named "items and/or features to be tested":

I All supported credit cards II Language localization II Valid and invalid advances IV Usability V Response time

---

QUESTION 8

"Statement Testing" is part of:

A. Experience based testing

B. Decision Testing

C. Specification Based testing

D. Structured based testing

Correct Answer: D

QUESTION 9

Dynamic Analysis Tools are used to:

A. Determine differences between files or databases.

B. Monitor and report on how a system behaves under a variety of conditions.

C. Find defects, such as memory leaks, while software is executing.

D. Measure the percentage of specific types of code structure that have been exercised.

Correct Answer: C

QUESTION 10

Which of the following is a characteristic of good testing in any life cycle model?

A. Analysis and design of tests begins as soon as development is completed.

B. Some, but not all, development activities have corresponding test activities.

C. Each test level has test objectives specific to that level.

D. All document reviews involve the development team.

Correct Answer: C

QUESTION 11

You have to specify test cases based on equivalence partitioning and boundary value analysis for an internet shop selling baby shoes. The shop provides a selection of shoes based on the following input parameters:

-There are 4 different sizes, depending on the age of the baby. The system selects the appropriate size based on the following criteria:

1.

0 < age
