Vendor: Sybase

Exam Code:510-033

Exam Name: Sybase Replication Server Administrator Pro Exam

Version: Demo

QUESTION 1

Which of the following is NOT performed by the rebuild queues command?

A. Deallocate all stable queues

B. Signal upstream Replication Servers to re-send transactions

C. Set DSI connection to loss detection mode

D. Drop damaged stable device partitions

Correct Answer: D

QUESTION 2

Which of the following is TRUE about stored procedure replication?

A. Applied functions replicate from the replicate dataserver to the primary dataserver.

B. A request function replicates from the primary dataserver to the replicate dataserver.

C. Applied functions replicate from the primary dataserver to the replicate dataserver.

D. Round trip functions start at the primary dataserver, then move to the replicate dataserver then back to the primary.

Correct Answer: C

QUESTION 3

Which materialization method should be chosen for a table that cannot be locked and has over 100,000 rows?

A. Automatic atomic

B. Bulk atomic

C. Bulk nonatomic

D. Bulk incremental atomic

E. Automatic nonatomic

Correct Answer: C

QUESTION 4

Which statement is CORRECT about dump marker?

A. It dumps all transactions into a Stable Device.

B. It instructs ASE to write a dump marker to the log when dump begins.

C. It dumps all transactions for primary database and truncates the log.

D. It instructs Replication Server to write a dump marker in the Stable Device.

Correct Answer: B

QUESTION 5

Which of the following statements describe the behavior of Publications? (Choose 2)

A. Improve replication performance

B. Degrade replication performance

C. May centralize administrative effort

D. May reduce total administrative effort

Correct Answer: CD

QUESTION 6

Which of the following are TRUE about articles? (Choose 2)

A. Must contain a reference to an existing Replication Definition in the same primary database

B. Must be defined in the replicate database where the associated subscription will be created

C. May contain a WHERE clause that limits the selection of data from a table referenced in the associated Replication Definition

D. Once created, can be utilized in any publication definition that references it

E. Must contain all column names included in the searchable columns of the associated Replication Definition

Correct Answer: AC

QUESTION 7

The command admin config is used to display information related to which parameters below? (Choose 3)

A. Route

B. Subscription

C. Logical connection

D. Physical connection

E. Replication Definition

Correct Answer: ACD

QUESTION 8

Which of the following thread types is responsible for serializing transactions?

A. DIST

B. DSI

C. RSI

D. SQM

E. SQT

Correct Answer: E

QUESTION 9

How many blocks are there in a segment of a replication queue?

A. 16

B. 32

C. 48

D. 64

E. 72

Correct Answer: D

QUESTION 10

Which of the following are TRUE about the DSI Scheduler and DSI Executor threads when Parallel DSI is configured for a single replicate database? (Choose 2)

A. There are multiple DSI Scheduler threads, one for each DSI connection.

B. There is a single DSI Scheduler thread for all DSI connections.

C. There are multiple DSI Executor threads, one for each DSI connection.

D. There is a single DSI Executor thread for all DSI connections.

Correct Answer: BC

QUESTION 11

What is the default serialization method in the command dsi_serialization_method?

A. No_wait

B. Wait_for_start

C. Wait_for_commit

D. None

Correct Answer: C

QUESTION 12

When parallel DSI is enabled, there are multiple

A. DSI-Scheduler threads.

B. RSI-User threads.

C. DSI-Executor threads.

D. DIST threads.

Correct Answer: C
