Vendor: Huawei

Exam Code:H13-622

Exam Name:HCNP-Storage-CBDS (Constructing Big Data Storage)

Version: Demo

QUESTION 1

A NAS storage system supports file system sharing, and the underlying protocol transmits data based on iSCSI.

A. True

B. False

Correct Answer: B

QUESTION 2

Which of the following ports is used for firewall software upgrade and advanced debugging in SX6018?

A. USB port

B. 12C port

C. Management network port

D. Console port

Correct Answer: B

QUESTION 3

In an N8500 clustered NAS system, the Veritas Volume Manager (VxVM) is located between the operating system and the data management system. The VxVM accesses disks using the interface provided by the operating system, makes the physical storage devices connected to hosts invisible, and provides a logical device layer for the data management system. The logical devices on this layer are called VxVM volumes.

A. True

B. False

Correct Answer: A

QUESTION 4

The HUAWEI OceanStor 9000 can be managed using web browsers. If an OceanStor 9000 storage system uses default settings, which of the following entered in the browser address box is correct?

A. https://IP:httpsport/webui

B. http://IP:httpsport/tools

C. http://IP:httpsport

D. https;//IP:httpsport

Correct Answer: A

QUESTION 5

If an OceanStor 9000 storage system consists of three P nodes and uses GE for the front-end network, how many IP addresses must be planned for the front-end service network segment?

A. 17

B. 18

C. 19

D. 20

Correct Answer: D

QUESTION 6

Offline software version upgrade of Huawei OceanStor 9000 interrupts services. The service downtime varies depending on the upgrade duration.

A. True

B. False

Correct Answer: A

QUESTION 7

The master account is used to enter the CLI mode of N8500 V200R001. Which of the following operations can be performed related to NFS? (Select three.)

A. nfs server show

B. nfs server status

C. nfs server start

D. nfs server stop

Correct Answer: BCD

QUESTION 8

When an engine node of an N8500 clustered NAS storage system needs to connect to multiple ports on a controller of a storage unit, ensure that ports on different interface modules are used.

A. True

B. False

Correct Answer: A

QUESTION 9

In the OceanStor 9000, a node pool is a collection of nodes that have the same characteristics such as physical type and access performance, and DST allows a user to divide physical nodes in the same file system into node pools.

A. True

B. False

Correct Answer: A

QUESTION 10

Which are the key parameters used to evaluate the performance of an N8500 clustered NAS storage system? (Select three.)

A. Number of network ports per engine node

B. Number and model of CPUs and memory capacity per engine node

C. Communication links between the NAS engine and the storage units

D. NAS engine operating system and version

Correct Answer: ABC

QUESTION 11

The InfoReplicator feature of Huawei OceanStor 9000 supports both synchronous and asynchronous remote replications.

A. True

B. False

Correct Answer: B

QUESTION 12

In performance optimization of the N8500 clustered NAS storage systems, which of the following issues must the maintenance personnel be aware of concerning LUNs and controllers? (Select three.)

A. Create only one LUN for each RAID group.

B. Set LUNs to forcible write back without mirroring.

C. Ensure that the owning controller and the working controller of a LUN are the same.

D. Disks that compose a file system are evenly distributed on controllers.

Correct Answer: ACD
