Exam Name:OEM Manufacturing and Deployment for
Windows 10

Version:Demo

QUESTION 1

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You have a custom image of Windows 10.

You need to deploy the image to a computer.

Which parameter should you specify when you run `dism.exe`?

- A. `/Add-Capability`
- B. `/Add-Driver`
- C. `/Add-Package`
- D. `/Add-ProvisionedAppxPackage`
- E. `/Apply-CustomDataImage`
- F. `/Apply-Image`
- G. `/Apply-Unattend`
- H. `/Export-Image`

Correct Answer: F

QUESTION 2

You are creating an image of Windows 10 for a new model of computers that will have Microsoft Office 2016 installed.

You install the Office Deployment Tool.

You need to install Office 2016. The solution must install Microsoft Word and Excel without installing any other Office applications.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- Run setup.exe and specify the /packager parameter.
- Create a Configuration.xml file.
- Run setup.exe and specify the /configure parameter.
- Run setup.exe and specify the /download parameter.
- Create an Install.json file.

AnswerArea

Correct Answer:

Actions

- Run setup.exe and specify the /packager parameter.
-
-
-
-
- Create an Install.json file.

AnswerArea

- Create a Configuration.xml file.
- Run setup.exe and specify the /download parameter.
- Run setup.exe and specify the /configure parameter.

QUESTION 4

You have a reference computer that runs Windows 10. The computer contains a provisioning package named Package1.ppkg. Package1.ppkg is located in C:\Packages\.

You plan to create an image of the reference computer.

You run sysprep.exe on the computer, and then you start the computer by using Windows Preinstallation Environment (Windows PE).

You need to ensure that the image uses the least amount of disk space possible.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

QUESTION 5

You have a Windows Recovery Environment (Windows RE) image.

You make changes to applications, languages, and updates in the image.

After the changes, the size of the image increases to 500 MB.

You need to modify the deployment script to ensure that the recovery partition has the required amount of free space. The solution must minimize the space of the recovery partition.

To which size should you set the recovery partition?

- A. 550 MB
- B. 820 MB
- C. 1024 MB
- D. 1524 MB

Correct Answer: B

QUESTION 6

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You mount an image of Windows 10.

You download 10 Windows 10 update packages to separate folders. Some of the update packages contain dependencies to the other update packages. You are unaware of the specific dependencies.

You need to add all the update packages to the image in the correct order.

Solution: You copy all the updates to the same folder. You run `dism.exe/Add-Package` once and specify the `/PackagePath` parameter once.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/add-or-remove-packages-offline-using-dism>

QUESTION 7

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains

a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are configuring a reference computer for a new UEFI-based deployment image of the 64-bit version of Windows 10. The reference computer has two physical hard disk drives.

You need to configure a partition on Disk 0 to support a recovery partition.

Solution: You create an MSR partition of 120 MB that uses the ReFS file system.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/configure-uefigpt-based-hard-drive-partitions>

QUESTION 8

You are building a Windows Preinstallation Environment (Windows PE) image on a computer named Computer1.

You have an executable file named App1.exe in the C:\Tools\folder. App1.exe is a command line tool that can be run in Windows PE.

You run the following commands on Computer1.

```
copyype.cmd amd64 C:\WinPE
```

```
dism.exe/Mount-Image/ImageFile:c:\WinPE\media\sources\boot.wim/index:1/MountDir:C:\WinPE\Mount
```

You need to ensure that you can run App1.exe from Windows PE. App1.exe must be in the root of X: when Windows PE starts.

Which command should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 9

You plan to deploy a new image of Windows 10.

You mount the image and preinstall an app from the Windows Store.

You need to manually test whether the app runs as expected.

What should you do first?

- A. Start the computer, press SHIFT+10, and then run sfc.exe.
- B. Remove the license file from the package files, and then start the computer in audit mode.
- C. Start the computer in audit mode, and then create a new user profile.
- D. Start the computer, and then complete the Out-of-Box-Experience (OOBE).

Correct Answer: D

QUESTION 10

You have a reference image of the 64-bit version of Windows 10. The reference image contains an application named App1. You need to ensure that App1 is pinned to the Start menu.

Which tool or tools should you use to apply the custom Start layout to the image?

- A. image.exe and Windows Preinstallation Environment (Windows PE)
- B. dism.exe and File Explorer
- C. Microsoft Application Compatibility Toolkit (ACT)
- D. Windows System Image Manager (Windows SIM)

Correct Answer: D

References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/customize-the-start-screen>

QUESTION 11

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have an image of Windows 10 for a new desktop computer model.

You plan to deploy the computer to multiple regions around the world.

You need to add new languages to the image by using Features on Demand language packs.

Which parameter should you specify when you run dism.exe?

- A. /Add-Capability
- B. /Add-Driver
- C. /Add-Package
- D. /Add-ProvisionedAppxPackage
- E. /Apply-CustomDataImage
- F. /Apply-Image
- G. /Apply-Unattend
- H. /Export-Image

Correct Answer: C

References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/add-drivers-langs-universal-apps-sxs>

QUESTION 12

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You have an image of Windows 10 that contains a recovery image.

You modify the recovery image.

You need to remove all the unnecessary resource files from the recovery image.

Which parameter should you specify when you run `dism.exe`?

- A. `/Add-Capability`
- B. `/Add-Driver`
- C. `/Add-Package`
- D. `/Add-ProvisionedAppxPackage`
- E. `/Apply-CustomDataImage`
- F. `/Apply-Image`
- G. `/Apply-Unattend`
- H. `/Export-Image`

Correct Answer: H

QUESTION 13

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You mount an image of Windows 10.

You download 10 Windows 10 update packages to separate folders. Some of the update packages contain dependencies to the other update packages. You are unaware of the specific dependencies.

You need to add all the update packages to the image in the correct order.

Solution: You run `dism.exe/Add-Package` 10 times. Each time you run the command, you specify the `/IgnoreCheck` and `/PreventPending` parameters.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 14

You have an image of Windows 10.

You plan to deploy the image to a new computer.

You run `sysprep.exe /generalize /oobe /shutdown`, and then you capture the image.

You deploy the image to the computer.

You add an application and a driver to the online image.

You need to prepare the computer for the end user.

Which command should you run?

- A. `sysprep.exe /oobe`
- B. `sysprep.exe /generalize /audit`
- C. `dism.exe /Apply-Image`
- D. `imagex.exe /capture`

Correct Answer: A

References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/boot-windows-to-audit-mode-or-oobe>

QUESTION 15

You create the working directories for a custom Windows Preinstallation Environment (Windows PE) image.

You need to create an ISO image of Windows PE that can be written to a DVD. The ISO image must be bootable.

Which command should you use?

- A. `bcdboot.exe`
- B. `oscdimg.exe`
- C. `bootsect.exe`
- D. `etfsboot.exe`

Correct Answer: B

References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/oscdimg-command-line-options>
