Vendor:EMC

Exam Code:E20-018

Exam Name:Virtualized Data Center and Cloud
Infrastructure Design Specialist

Version:Demo

QUESTION 1

Refer to the exhibit.

You are expanding the compute layer of a VDC, and need to add more access layer switches to provide connectivity to the hypervisors. However, there are no available ports on the two aggregation layer switches to accommodate the uplink connections from the new access layer switches, and there is no available funding to purchase additional aggregation layer switches. The active uplinks are operating at 95% of capacity.

What can be done to expand the access layer and not impact the performance of the existing environment?

- A. Aggregate the aggregation layer switches into a virtual switch. Reduce the number of uplink connections from each access layer switch by 50%.
- B. Aggregate the access layer switches into a virtual switch. Reduce the number of uplink connections to each aggregation layer switch by 50%.
- C. Aggregate the datacenter core switches. Reduce the number of uplink connections from each access layer switch by 50%.
- D. Aggregate the datacenter core switches. Reduce the number of uplink connections from each aggregation layer switch by 50%.

Correct Answer: A

QUESTION 2

What is a benefit of archiving data to the cloud using Atmos and FMA?

- A. Auto-deletes aging files
- B. Provides elastic object storage

- C. Improves search and index
- D. Accelerates file retrieval speed

Correct Answer: B

Explanation: References:

QUESTION 3

Why is there a need for a full risk assessment if a quick risk assessment has already been performed?

- A. A full assessment can help find operational exposures after implementation
- B. A full assessment is usually conducted by a third party to get an unbiased version of the risk profile
- C. A full assessment details all the exposures in high value/high risk assets
- D. A full assessment is always executed by internal auditing

Correct Answer: C

QUESTION 4

A company wants to ensure that their critical application can fail over to another physical host within the cluster without disruption. Which feature should be utilized?

- A. Online Migration
- B. High Availability
- C. Fault Tolerance
- D. Resource Pooling

Correct Answer: C

QUESTION 5

Which product enables storage tiering to be extended to the host platform?

- A. VFCache
- B. PowerPath/VE
- C. VPLEX
- D. VNX

Correct Answer: A

QUESTION 6

Which backup solution(s) are possible candidates when there is a need to restore specific files on a VM?

- A. VM-based backup and image-based backup
- B. Storage-based backup only
- C. Hypervisor-based ("VM as flat file") backup
- D. Storage-based backup and image-based backup

Correct Answer: A

QUESTION 7

A company has to implement a test/dev environment infrastructure as quickly as possible. The company does not have weeks or months to accomplish this. They also have limited resources available. Considering their timeline, what type of infrastructure would the company most likely have to choose?

- A. An offering from a cloud service provider
- B. A traditional data center
- C. An internal, virtualized environment with shared resources
- D. An internal, virtualized data center with automation

Correct Answer: A

QUESTION 8

Which is a scale-out NAS solution that can distribute data over multiple nodes for resiliency?

- A. EMC VPLEX
- B. EMC Symmetrix VMAX
- C. EMC Isilon
- D. EMC VNX

Correct Answer: C

QUESTION 9

- A. Management
- B. Business

C. Information security

D. Disaster recovery

Correct Answer: B

Explanation: References:

QUESTION 10

What is the primary consideration when performing a risk assessment?

A. Value of the asset

B. Location of the asset

C. Owner of the asset

D. Quantity of exposures

Correct Answer: A

QUESTION 11

Which properties define a cloud environment?

A. Self-service, dedicated leased services in-house

B. Dedicated, but privatized, virtualized data center technologies in-house

C. Power, connectivity, physical security

D. Self-service, Internet served computing, shared resources, pay as you use

Correct Answer: D

Explanation: References:

QUESTION 12

A VDC environment is to be deployed with several virtual machines (VMs). The data stores for the VMs will be hosted on a storage array-based local replication that has been proposed as the BC/DR solution. Restore granularity is at the individual VM level.

What is the optimal data layout to meet this requirement?

A. Individual LUNs for each virtual disk

B. All virtual disks on the boot LUN of the physical disks

C. Individual LUNS for each VMS virtual disk

D. Single large LUN for all VM virtual disks

Correct Answer: C
