Exam Name:Content Management System
Administration

Version:Demo

QUESTION 1

How would you enforce that the Content Server omit the usage of file extensions on stored files?

- A. set the use_extensions attribute to false on the dm_filestore object
- B. clear the a_content_type attribute of the dm_sysobject objects
- C. configure the accessing application to clear the full_format from the related dmr_content objects
- D. set each dmr_containment object to have the a_contain_desc attribute set to false

Correct Answer: A

QUESTION 2

Automatic tasks in all workflow instances are taking too long to be completed, overall CPU consumption is low, and the method_server_enabled value is set to False.

How can application performance be improved?

- A. use the method server as an execution agent wherever possible
- B. increase the number of method_server_threads in the server.ini configuration file
- C. increase the number of wf_agent_worker_threads in the server config object
- D. add a new Content Server installation to add a second method server

Correct Answer: C

QUESTION 3

After installing the Content Server, you change the default passphrase. What utility script must be run when the Content Server is restarted?

- A. dm_check_password
- B. dm_crypto_boot
- C. dm_crypto_create
- D. dm_change_password

Correct Answer: B

QUESTION 4

A repository has an installation owner account '\\dmadmin\\' and a repository owner account '\\sop.\\' What is the difference between these two accounts?

- A. The Documentum installation owner and the repository owner accounts have identical roles.
- B. The Documentum installation owner is a regular user in a repository; the repository owner has administrative rights over the repository.
- C. The Documentum installation owner is a superuser in the repository; the repository owner account owns the database tables used by the repository.
- D. While both users have administration privileges, the installation owner owns the repository database tables.

Correct Answer: C

QUESTION 5

A problem has been detected in the execution of a Content Server method. You need to isolate the problem as either the method server or the program code. What will you use to run the method program from the command line to determine the source of probable cause?

- A. session trace log output
- B. trace launch information
- C. method server access log
- D. method argument value

Correct Answer: B

QUESTION 6

What is a resource agent?

- A. It is a JMX-based monitoring tool that is accessible using Documentum Administrator.
- B. It is a feature of Application Builder, used to help manage lifecycles.
- C. It is a process used in conjunction with the Index Server to provide full-text indexing.
- D. It is a feature of WDK which allows administrators to more easily deploy components given to them by a developer.

Correct Answer: A

QUESTION 7

What is required for authenticating against a Windows system?

- A. a Windows account only

- B. a Windows account and a Documentum account
- C. a Documentum account only
- D. a Documentum account and an administrator role

Correct Answer: B

QUESTION 8

How do you check if someone has tampered with audit trail entries that have been signed by the Content Server?

- A. use the verifyaudit API to check whether the audit trail entry is valid
- B. use the getevents API to check what event have been performed to the audit trail entry.
- C. use the validate API to check whether the audit trail entry has changed
- D. use the listmessage API to check what has happened to the audit trail object

Correct Answer: A

QUESTION 9

Users are complaining that performance is slow. You recognize on the database machine that the disk I/O is consistently high and page faults are high. What is the most likely cause?

- A. network
- B. CPU
- C. disk
- D. memory

Correct Answer: D

QUESTION 10

The client has set up a Federation headquartered in the US (governing repository) and distributed plants in Brazil, India, and Australia (member repository). Each has its own local repository. The system is running, and users can search across the repositories. A new Vice President of Finance has been hired in Australia and is added to the Australia repository. After three days the Vice President complains the corporate financial report in the US is not accessible. Why can the Vice President not see the US report if they are in the management group and have the appropriate permissions?

- A. The report permission set is not set to the ACL.
- B. The Vice President was created in the Australia repository only.
- C. The federation update job did not run to propagate the changes.

D. The governing site projection is not configured correctly.

Correct Answer: B

QUESTION 11

Which DQL hint could be used to help to optimize a complex query where the join seems to be the major bottleneck?

- A. INDEX
- B. RETURN_TOP
- C. FORCE ORDER
- D. OPTIMIZE_TOP

Correct Answer: C

QUESTION 12

What performance information is obtained from the following trace snippet? 18.578 3.656 [http-8080-1] (RPCs=93) com.documentum.fc.client.DfPersistentObject@14bdc05.save() ==>

- A. The save took 18.578 seconds to execute.
- B. The save took 93 seconds to execute.
- C. The save took 3.656 seconds to execute.
- D. The save took 382.11 seconds to execute.

Correct Answer: C
