Exam Name:Enterprise Geodata Management
Associate 10.5

Version:Demo

QUESTION 1

A GIS analyst sets up a layer file to display managed in an enterprise geodatabase. When using the layer file in a map, the user notices the following issues:

1.

A read exclamation mark appears next to the layer

2.

The layer fails to display any feature Which aspect of the file is causing the problem?

- A. OS authentication
- B. Invalid SQL statement in the definition query
- C. Unavailable in the definition query
- D. Invalid label expression

Correct Answer: D

QUESTION 2

Several tables with followed by an underscore and an H are visible in the ArcCatalog table of contents.

What is causing these tables to shows?

- A. Enabling archiving
- B. Disable archiving
- C. Enable editor tracking
- D. Disabling editor tracking

Correct Answer: C

QUESTION 3

An administrator needs to administer a workgroup geodatabase. Which section of the Catalog tree is used?

- A. Folder Connections
- B. Database Servers
- C. Database Connections
- D. GIS Server

Correct Answer: A

QUESTION 4

Users would like to build database connections to versions other than DFFAULT. Which Context menu item should be used?

- A. Administrator Geodatabase
- B. Connection Properties
- C. Geodatabase Connection Properties
- D. Properties

Correct Answer: A

QUESTION 5

What is an example of a point topology rule?

- A. Must Be Single part
- B. Must Be properly Inside
- C. Must Be Inside
- D. Must Not intersect

Correct Answer: B

QUESTION 6

How should a GIS administrator add a feature class to an existing replica?

- A. Import the feature class into the child, then synchronizes from child parent.
- B. Import the feature class into the parent, then synchronize both ways.
- C. Import the feature class into the include the new feature class.
- D. Use the Compare Schema and Import Scheme tools.

Correct Answer: A

QUESTION 7

The geodatabas administrator has requested the data creator make changes to the geometry storage of a feature class. The features class will need to be changed from SQL Geometry to SDEBINARY. Which workflow should the data

creator use?

- A. Use the Migrate Storage geoprocessing tool
- B. Changes the geometry storage type in the feature class properties.
- C. Use the geometry Spatial Reference geoprocessing tool
- D. Copy and paste the feature class to after the geometry storage type

Correct Answer: D

QUESTION 8

A GIS administrator needs to give users access to only subset of parcel feature and filed as well as tax record information from a non-spatial table. Users must be denied access to sensitive information in each table.

What should the administrator choose to meet these requirements?

- A. Database view
- B. Query layer
- C. Relationship class
- D. ArcMap joins

Correct Answer: B

QUESTION 9

A data creator user wants to create a copy of a feature class schema in a different projection. Which workflow supports these requirements?

- A. Use a template feature class while creating the new feature class
- B. Copy and paste the feature class and change the configuration keyword
- C. Use export schema only man XML workspace document
- D. Use the Simple Data Loader

Correct Answer: A

QUESTION 10

Which user in the geodatabase can register an object as versioned?

- A. A user with edit permissions on the object
- B. A user who owns the data
- C. A user with administrator privileges in the geodatabase
- D. A user who owns a transaction version

Correct Answer: D

QUESTION 11

An enterprise geodatabase administrator needs to enable field workers to check out and edit versioned features that participate in a topology. The field edits will be performed on laptop computers using ArcGIS Desktop with a Basic license. Which technology should the administrator recommend to store data on the field workers' laptops?

- A. Workgroup geodatabase
- B. PostgreSQL database
- C. File geodatabase
- D. SQLite database

Correct Answer: C

QUESTION 12

A GIS assistant is creating a new one-way, parent-to-child replica

There are 10 feature classes added to ArcMap, and the Create Replica wizard completes successfully.

However only 8 feature classes were replicated to the child geodatabase.

What should the GIS assistant confirm in the 2 missing feature classes before calling Esri Support?

- A. The All Features option was used in the Create Replica wizard.
- B. The map document was NOT zoomed in to exclude the 2 feature classes.
- C. The feature classes are registered as versioned and have Global IDs.
- D. The connection between the parent and child is stable.

Correct Answer: C
