Exam Name:HCIP-Storage V5.0

Version:Demo

QUESTION 1

In N8500 V200NO01, which of the following commands can be used to check whether the status of the file system is online? ()

- A. storage s list
- B. storage fs online
- C. storage fs status
- D. storage fs status show

Correct Answer: A

QUESTION 2

The following description of the FusionStorage management network is incorrect:

- A. A node where DSS/OMS/FSM is deployed, two interfaces form a logical bond interface, and one pipe is allocated to the bond interface.
- B. Only deploy FusionStorage file or object storage services, the first 3~5 nodes in the cluster are used as management nodes, and 1 is assigned to them Each management network IP address will automatically float on the NIC1 interface of these nodes.
- C. The Mgmt interfaces of all storage nodes are connected to the management switch, and each node is assigned a management network IP address.
- D. When FusionStorage file or object storage services are deployed in a mixed manner, select at least one object node as the management node (management section). The total number of points does not exceed 5). And assign a management network IP address to it, and it will automatically float on the NIC1 interface of these nodes.

Correct Answer: D

QUESTION 3

Regarding the characteristics of a single file system in Huawei distributed storage, which of the following option descriptions are correct ()

- A. When accessing a single file system, users need to pay attention to the specific data storage location
- B. Automatically create a unified file system when the system starts
- C. In a single file system, file collections are presented as directories
- D. The system provides a unified file system for accessing all available space

Correct Answer: ABCD

QUESTION 4

There are many service support system functions in the N8500 clustered NAS system, such as NFS and CIFS basic service groups. Which is as follows One is not an NFS service group resource agent?

- A. NIC
- B. Hashadow
- C. Disk
- D. IP

Correct Answer: D

QUESTION 5

File-level deduplication is also called single-instance storage (SIS). It checks the attributes of the files to be stored according to the index and compares them with the stored files. For comparison, if there is no identical file, store it and update the index, otherwise only store the pointer to the existing file.

- A. True
- B. False

Correct Answer: A

QUESTION 6

Single selection In the case of a single port, Huawei Oceanstor 9000 cannot implement the SMB3 Multihannel function.

- A. True
- B. False

Correct Answer: B

QUESTION 7

In the feature of Huawei Oceanstor 9000InfoReplicator. Pair is a data replication relationship, which of following statement about the state transition of the Pair is incorrect (multiple choice)

- A. In the case of Pair failure, its status includes recovery, invalidation, synchronization, split
- B. When the abnormal link recovers and the recovery strategy is manual, the status of the Pair will be migrated to "synchronizing"

C. When the InfoReplicator configuration is destroyed, the status of the Pair becomes "Invalid"

Correct Answer: ABC

QUESTION 8

Huawei all-flash storage devices need to be planned and multi-selected before deployment. Which of the following options are required for storage networking to plan ()

- A. Heartbeat network
- B. IP address
- C. Management network
- D. Business networking

Correct Answer: ABC

QUESTION 9

Colleagues customize active-active disaster recovery solutions for customers. The customer already has a third-party storage system and plans to purchase a new OceanStor. In 5300 V3, the two sets of equipment are placed in two data centers to implement active-active disaster recovery. The solution:

- A. Feasible, the storage device meets the requirements of the self-sufficient active-active disaster recovery solution.
- B. Not feasible. The active-active disaster recovery solution requires at least two sets of OceanStor V3 storage.
- C. Not feasible. The active-active disaster recovery solution only supports Huawei storage and does not support third-party storage.

Correct Answer: B

QUESTION 10

In scenarios where customers have high requirements for file read and write performance, if the performance calculation application scenario, the backend of Oceanstor 9000 has been With 10GE networking, what type of network should customers recommend for the front-end business network? (Multiple choice)

- A. 0GE networking
- B. Old network
- C. GE networking

D. FC networking

Correct Answer: AB

QUESTION 11

In the Huawei OceanStor 9000, which of the following is not an authentication method supported by NFS sharing?

A. NIS authentication

B. LDAP authentication

C. Client IP address/host name authentication

D. Local user authentication

Correct Answer: D

QUESTION 12

Huawei's HypeMetro active-active disaster recovery supports heterogeneous storage, so a single third-party storage certified by Huawei is used to form active-active through HypeMetro.

A. True

B. False

Correct Answer: B
