QUESTION 1

A fully functional WLAN is deployed in a campus network using the following script.

```
aaa server-group group-corp
  auth-server radius1

aaa profile aaa-corp
  authentication-dot1x authenticated
  dot1x-server-group group-corp
!
wlan ssid-profile ssid-corp
  essid corp
  opmode wpa2-aes
!
wlan virtual-ap vap-corp
  aaa-profile aaa-corp
  vlan 20
  ssid-profile ssid-corp
!
ap-group building1
  virtual-ap vap-corp
```

Which part of the script can a network administrator re-use to assign a different default role to users when they connect to the same SSID in a second building?

- A. server group and ssid profile
- B. server group and VAP profile
- C. server group, aaa profile, and ssid profile
- D. server group and VAP

Correct Answer: A

QUESTION 2

An Aruba WiFi solution for a football stadium includes 2500 APs, two Mobility Masters (MM), and eight Mobility Controllers (MCs). Key requirements are seamless roaming and even distribution of APs and clients, even during a MC failure. Which MC's deployment option offers seamless roaming, and even AP client distribution among all MCs before and after a MC failure?

- A. a two-member HA group in dual mode
- B. an eight-member L2-connected cluster
- C. two four-member L2-connected clusters

D. an eight-member HA group in dual mode

Correct Answer: C

QUESTION 3

An organization has several RAPs at different locations that broadcast two SSIDs. The internet-only SSID is in bridge/always mode, and the corporate SSID is in split-tunneling/standard mode. The network administrator deploys 10 more

RAPs in different locations.

Users can successfully connect to the corporate SSID that is propagated by a RAP at a remote location. However, they report that it takes too long to access public internet web sites.

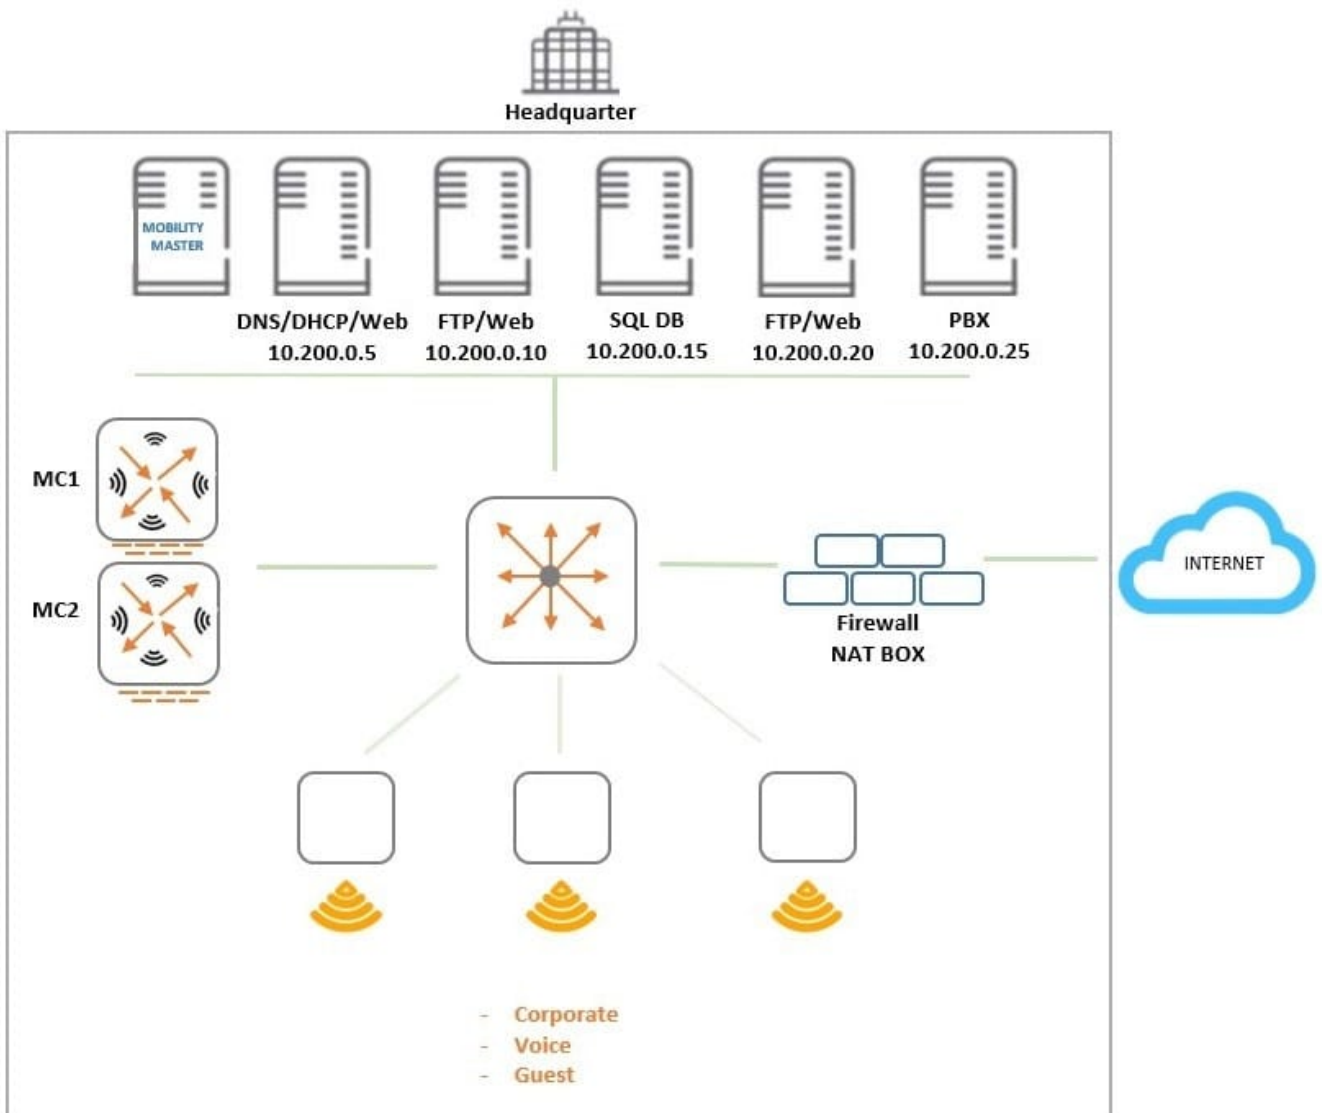

What is one part of the configuration that should be checked by the network administrator to verify this RAP deployment?

- A. User roles policies
- B. IP pool
- C. Operating mode
- D. Assigned VLAN

Correct Answer: A

QUESTION 4

Refer to the exhibit.

An organization provides WiFi access through a corporate SSID with an Aruba Mobility Master (MM) - Mobility Controller (MC) network that includes PEF functions. The organization wants to have a single firewall policy configured and applied

to the employee role.

This policy must allow users to reach Web, FTP, and DNS services, as shown in the exhibit. Other services should be exclusive to other roles. The client NICs should receive IP settings dynamically.

Which policy design meets the organization's requirements while minimizing the number of policy rules?

- A.
- ```
netdestination alias1
 host 10.200.0.5
 host 10.200.0.10
 host 10.200.0.20

netdestination alias2
 host 10.200.0.10
 host 10.200.0.20

ip access-list session policy1
 user host 10.200.0.5 svc-dns permit
 user alias alias1 svc-http permit
 user alias alias2 svc-ftp permit
```
- B.
- ```
netdestination alias1
  host 10.200.0.10
  host 10.200.0.20

ip access-list session policy1
  any any svc-dhcp permit
  user host 10.200.0.5 svc-dns permit
  user host 10.200.0.5 svc-http permit
  user alias alias1 svc-http permit
  user alias alias1 svc-ftp permit
```
- C.
- ```
netdestination alias1
 host 10.200.0.5
 host 10.200.0.10
 host 10.200.0.20

netdestination alias2
 host 10.200.0.10
 host 10.200.0.20

ip access-list session policy1
 any any svc-dhcp permit
 user host 10.200.0.5 svc-dns permit
 user alias alias1 svc-http permit
 user alias alias2 svc-ftp permit
```
- D.
- ```
netdestination alias1
  host 10.200.0.10
  host 10.200.0.20

ip access-list session policy1
  user host 10.200.0.5 svc-dns permit
  user host 10.200.0.5 svc-http permit
  user alias alias1 svc-http permit
  user alias alias1 svc-ftp permit
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: C

QUESTION 5

HOTSPOT

A network administrator wants to receive a major alarm every time a controller or an Aruba switch goes down for either a local or an upstream device failure. Which alarm definition must the network administrator create to accomplish this?

Hot Area:

Trigger

Type: ▼

Severity: ▼

Limit by number of down events: Yes No

Send Alerts for Thin APs when Controller is Down: Yes No

Send Alerts when Upstream Device is Down: Yes No

Send Alerts on Reboot: Yes No
Include reboots detected by uptime reset or reboot count increase

Conditions

Matching conditions: All Any

New Trigger condition

OPTION	CONDITION	VALUE	
<input type="text" value="Device Type"/> ▼	<input type="text" value="is"/> ▼	<input type="text" value="Router/Switch"/> ▼	<input type="button" value="X"/>
<input type="text" value="Device Type"/> ▼	<input type="text" value="is"/> ▼	<input type="text" value="Controller"/> ▼	<input type="button" value="X"/>

Trigger Restrictions

Folder: ▼

Include Subfolders: Yes No

Group: ▼

Alert Notifications

Correct Answer:

Trigger

Type: ▼

Severity: ▼

Limit by number of down events: Yes No

Send Alerts for Thin APs when Controller is Down: Yes No

Send Alerts when Upstream Device is Down: Yes No

Send Alerts on Reboot: Yes No
Include reboots detected by uptime reset or reboot count increase

QUESTION 6

An organization owns a fully functional multi-controller Aruba network with a Virtual Mobility Master (VMM) in VLAN20. They have asked a network consultant to deploy a redundant MM on a different server. The solution must offer the lowest convergence time and require no human interaction in case of failure.

The servers host other virtual machines and are connected to different switches that implement ACLs to protect them. The organization grants the network consultant access to the servers only, and appoints a network administrator to assist with the deployment.

What must the network administrator do so the network consultant can successfully deploy the solution? (Choose two.)

- A. Allocate VLAN20 to the second server, and extend it throughout the switches, then reserve one IP address for the second MM and another IP address for its gateway.
- B. Allocate VLAN20 to the second server, and permit routing between them, then reserve one IP address for the second MM and another IP address for its gateway.
- C. Configure an ACL entry that permits IP protocol 50, UDP port 500, and multicast IP 224.0.0.18.

D. Allocate VLAN20 to the second server, and extend it throughout the switches, then reserve one IP address for the second MM and another for the VIP.

E. Configure an ACL entry that permits UDP 500, TCP 4500, and multicast IP 224.0.0.5.

Correct Answer: AE

QUESTION 7

Refer to the exhibits. Exhibit 1

```

A network administrator adds a new Mobility Controller (MC) to the production Mobility Master (MM) and deploys APs that start broadcasting the employee SSID in the West wing of the building. Suddenly, the employees report client

disconnects. When accessing the MM the network administrator notices that the MC is unreachable, then proceeds to access the MC's console and obtains the outputs shown in the exhibits.

What should the network administrator do next to solve the current problem?

- A. Open a TAC case and send the output of tar crash.
- B. Kill two zombie processes then reboot the MC.
- C. Verify the license pools in the MM.
- D. Decommission the MC from the MM, and add it again.

Correct Answer: C

QUESTION 8

Refer to the exhibit.

```
(MC2) #show running-config | include masterip
Building Configuration...
masterip 10.1.1.10 vpn-ip 19.20.1.2 ipsec aruba123 peer-id xx:xx:xx:xx:xx:xx
secondary masterip 10.2.1.10 vpn-ip 66.0.100.1 ipsec-factory-cert vpn-mac-1 xx:xx:xx:xx:yy:yy interface v1an 140
(MC2) #
```

An Aruba network is deployed with L2 and L3 Mobility Master (MM) redundancy across two datacenters, as shown in the exhibit. The network administrator confirms that all Mobility Controllers (MC) are currently communicating with MM1, which is the L2 Active and, L3 Primary.

Which MM IP will MCs communicate with if MM1 fails?

- A. 10.1.1.10
- B. 10.1.1.12
- C. 10.2.1.10

D. 10.2.1.21

Correct Answer: C

QUESTION 9

Refer to the exhibit.

```
(MC11) [mynode] #show ap database | exclude =
AP Database
-----
Name  Group  AP Type  IP Address  Status  Flags  Switch IP  Standby IP  Wired MAC Address  Serial #  Port  FQLN  Outer IP  User

Channel followed by "*" indicates channel selected due to unsupported configured channel.
"Spectrum" followed by "^" indicates local Spectrum override in effect.

Num Aps:1
```

A network administrator deploys a new Mobility Master (MM) - Mobility Controller (MC) network. To test the solution, the network administrator accesses the console of a pair of APs and statically provisions them. However, one of the APs does not propagate the configured SSIDs. The network administrator looks at the logs and sees the output shown in the exhibit.

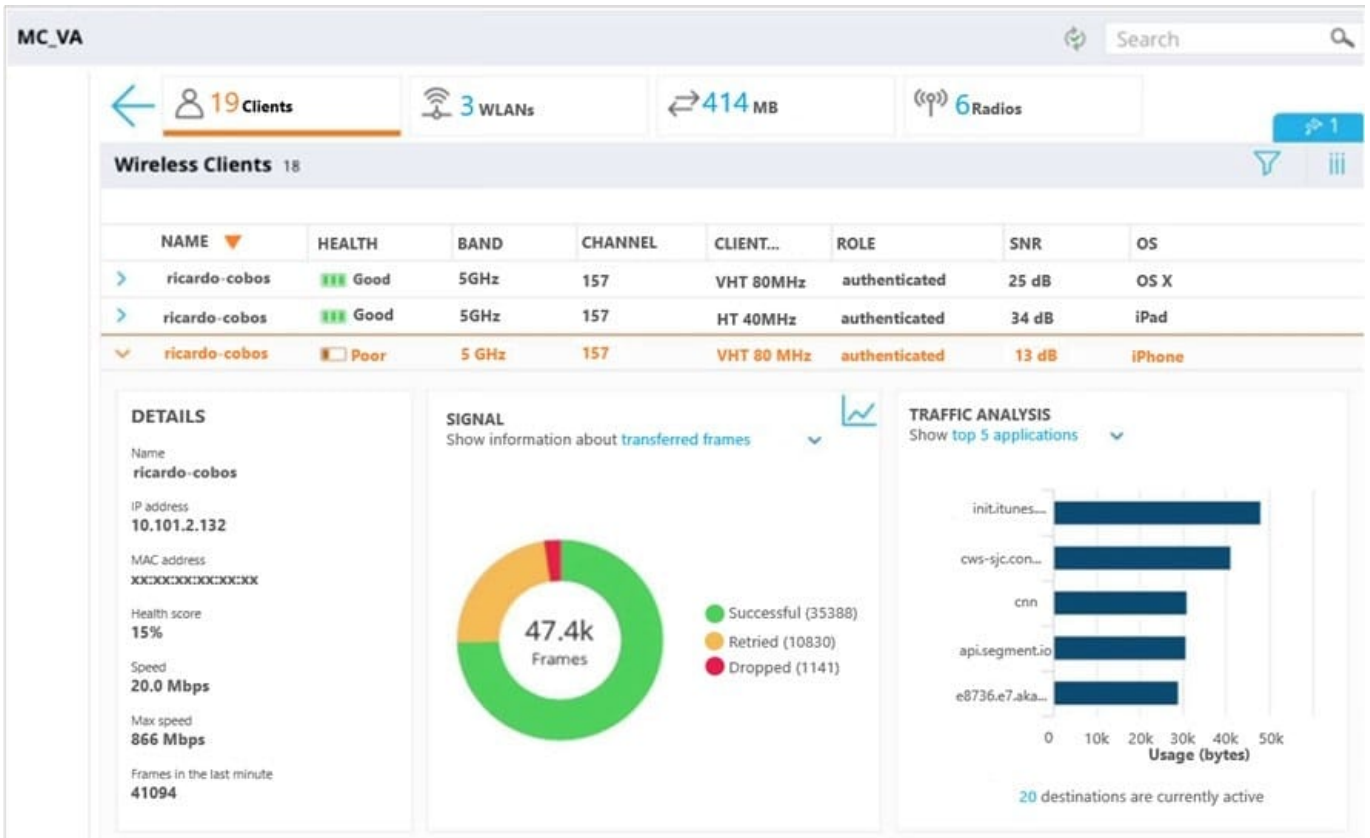

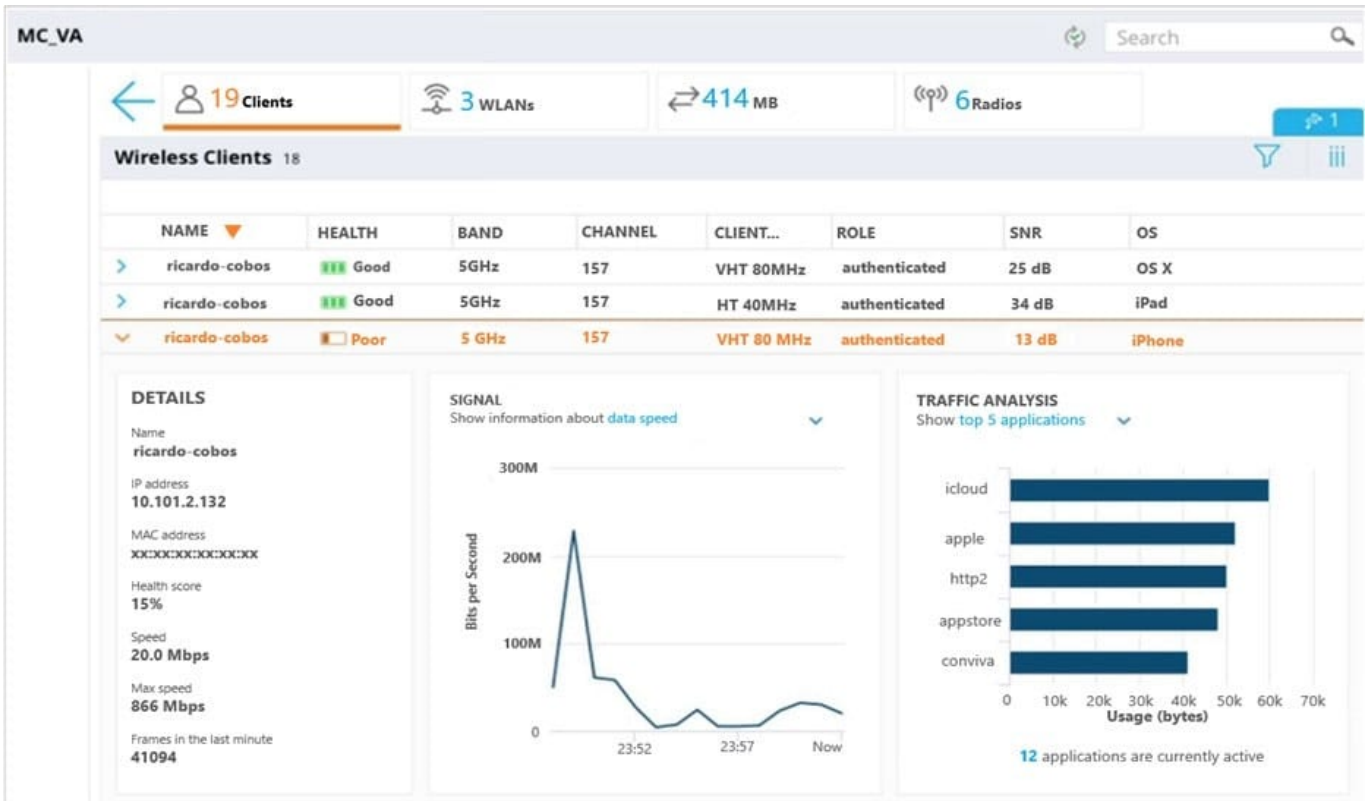

Which actions must the network administrator take to solve the problem?

- A. Create another AP group in the MC's configuration, and re-provision one AP with a different group.
- B. Re-provision one of the APs with a different name, and add new entries with the proper group in the whitelist.
- C. Re-provision the AP with a different group, and modify the name of one AP in the whitelist.
- D. Re-provision one of the APs with a different name or modify the name in the whitelist.

Correct Answer: D

QUESTION 10

Refer to the exhibits.

A user reports slow response time to a network administrator and suggests that there might be a problem with the WLAN. The user's phone supports 802.11ac in the 5 GHz band. The network administrator finds the user in the Mobility Master (MM) and reviews the output shown in the exhibit.

What can the network administrator conclude after analyzing the data?

- A. The low SNR forces the client to back off to low MCs, therefore speed is low and retransmits are high.
- B. Client health is poor, but SNR is fair. TX power must be increased in both the client and the AP.
- C. Since SNR is good, then the high retransmit rate must be due a hidden node scenario or high interference.
- D. High Successful frame count and high Max Speed is an indication of a healthy client. Connection will improve at any time.

Correct Answer: D

QUESTION 11

Refer to the exhibit: A company acquires ten barcode scanners to run inventory tasks. These WiFi devices support WPA2-PSK security only. The network administrator deploys a WLAN named scanners using the configuration shown in the exhibit. What must the network administrator do next to ensure that the scanner devices successfully connect to their SSID?

New WLAN

More Secure

A vertical slider on the left indicates security levels: Enterprise (top), Personal (middle, highlighted in orange), and Open (bottom). The slider is positioned at the Personal level. To the right, configuration options are shown:

- Key management: WPA3-personal (dropdown)
- Enable backward compatibility
- Passphrase: [masked]
- Retype: [masked]
- MAC authentication: Enabled (dropdown)
- Blacklisting:

New WLAN

Default role: logon (dropdown)

MAC authentication role: scanners (dropdown)

Show [roles](#)

- A. Set internal as the MAC authentication server group.
- B. Add scanner MAC addresses in user derivation rules.
- C. Enable L2 Authentication Fail Through.

D. Add scanner MAC addresses in the internal database.

Correct Answer: D

QUESTION 12

A joint venture between two companies results in a fully functional WLAN Aruba solution. The network administrator uses the following script to integrate the WLAN solution with two radius servers, radius1 and radius2.

```
aaa authentication-server radius radius1
  host 10.254.1.1
  key key111
!
aaa authentication-server radius radius2
  host 10.20.2.2
  key key222
!
aaa server-group group-corp
auth-server radius1

aaa profile aaa-corp
authentication-dot1x authenticated
dot1x-server-group group-corp
!
wlan ssid-profile ssid-corp
ssid corp
opmode wpa2-aes
!
wlan virtual-ap vap-corp
aaa-profile aaa-corp
ssid-profile ssid-corp
!
ap-group building1
virtual-ap vap-corp
```

While all users authenticate with username@domainname.com type of credentials, radius1 has user accounts with the domain name portion. Which additional configuration is required to authenticate corp1.com users with radius1 and corp2 users with radius2?

- A.
- ```
aaa authentication-server radius radius1
trim-fqdn
!
aaa server-group-corp
auth-server radius1 match-domain corp1.com
auth-server radius1 match-domain corp2.com
```
- B.
- ```
aaa authentication-server radius radius1
trim-fqdn
!
aaa server-group-corp
auth-server radius1 match-authstring corp1.com
auth-server radius1 match-authstring corp2.com
```
- C.
- ```
aaa authentication-server radius radius1
!
aaa server-group-corp
auth-server radius1 match-string corp1.com trim-fqdn
auth-server radius1 match-string corp2.com
```
- D.
- ```
aaa server-group-corp
auth-server radius1 match-fqdn corp1.com
auth-server radius1 trim-fqdn
auth-server radius2 match-fqdn corp2.com
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A
