Vendor:Juniper

Exam Code:JN0-1101

Exam Name:Juniper Networks Certified Design
Associate

Version:Demo

QUESTION 1

Which component triggers the quarantine of an infected endpoint?

- A. ALG
- B. firewall
- C. Policy Enforcer
- D. switch

Correct Answer: C

QUESTION 2

What is the first step of business continuity planning?

- A. know your network
- B. test the plan
- C. assess the risk
- D. formulate the plan

Correct Answer: A

QUESTION 3

What are three components of an RFP? (Choose three.)

- A. general information about the existing network environment
- B. a list of devices to meet the design requirements
- C. a list of design requirements
- D. a list of available IP addresses within their current IP allocation
- E. the types of solutions that the design must include

Correct Answer: ACE

QUESTION 4

In your network design, you must ensure that all user sessions passing through an SRX Series device remain active if there is a device failure.

Which mechanism will accomplish this design requirement?

- A. chassis clustering
- B. MC-LAG
- C. Virtual Chassis
- D. VRRP

Correct Answer: A

QUESTION 5

You are asked to secure the routing engine of all Junos devices in your design. The design should not affect transit traffic.

Which action will accomplish this task?

- A. Use a firewall filter on a revenue port.
- B. Use a firewall filter on the loopback interface.
- C. Use a firewall filter on the fxp0 interfaces.
- D. Use a firewall filter on the management interface.

Correct Answer: B

QUESTION 6

What are two guidelines when designing campus networks? (Choose two.)

- A. The design must account for high control plane resources.
- B. The design must allow for network resource availability.
- C. The design must protect customer resources.
- D. The design must allow for high bandwidth.

Correct Answer: BC

QUESTION 7

What are two phases of assessment when designing network security? (Choose two.)

- A. to layout a logical design
- B. to layout a physical design

- C. to identify requirements
- D. to perform data analysis

Correct Answer: AC

QUESTION 8

What is a feature provided by devices in the WAN aggregation site of a large enterprise WAN deployment?

- A. Internet gateway
- B. MACsec
- C. power redundancy
- D. DHCP

Correct Answer: A

QUESTION 9

Which Juniper automation tool enables administrators to write custom Python scripts that use the Junos XML API?

- A. REST Explorer
- B. JSNAPy
- C. JET
- D. PyEZ

Correct Answer: D

QUESTION 10

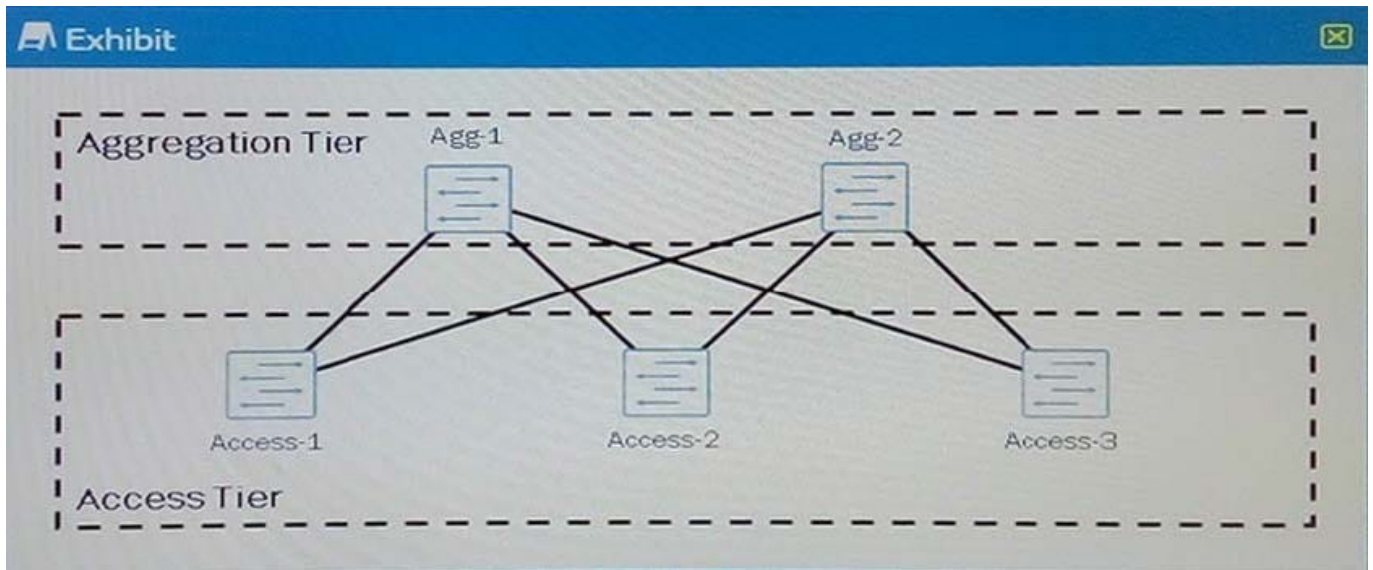

What are two requirements that every RFP response should include? (Choose two.)

- A. a support plan that includes details about servicing the components once operational
- B. a detailed competitor comparison document that indicates the proposed design is the least expensive option
- C. a detailed forecast of exception handling after the design has been implemented and is operational
- D. an implementation plan that includes a description of how the design will be implemented

Correct Answer: AD

QUESTION 11

Click the Exhibit button.

Referring to the exhibit, you are designing a Layer 2 data center and you want to make sure that all the links between the access tier and the aggregation tier are used.

What should you do to accomplish this task?

- A. Use VRRP on Agg-1 and Agg-2.
- B. Place Agg-1 and Agg-2 in a Virtual Chassis.
- C. Use RSTP on all devices.
- D. Use BGP load balancing on all devices.

Correct Answer: B

QUESTION 12

You are designing a WAN implementation to securely connect two remote sites to the corporate office. A public Internet connection will be used for the connections.

Which statement is true in this situation?

- A. The connection should be secured using IPsec.
- B. The WAN edge devices must support MPLS.
- C. The connections support Layer 2 traffic bridging.
- D. The service provider can isolate traffic in a private MPLS instance.

Correct Answer: A
